1. Project Details

Project Title: **Student Resource Sharing Platform**

Problem Abstract:

The **Student Resource Sharing Platform** is a full-stack web application that helps students share and access academic materials within their college. Instead of using scattered sources like messaging apps or personal drives, the platform provides a centralized space where students can upload, search, download, and review resources such as notes, assignments, study guides, and previous year question papers.

The system is built using **React** for the frontend, **Node.js and Express** for the backend, and **MongoDB** for the database, with **JWT-based authentication** for secure access. Features like resource categorization, download tracking, ratings, and comments help students easily find useful materials and contribute to a collaborative learning environment.
